

2021 is all about corona vaccination.

Did you know...

... you need a **double dose** of the vaccines to ensure you are protected against serious illness and hospitalisation? This means two injections.

Certain target groups will receive a third shot for optimal protection.

... the vaccine does **not** make you **sick**, but it is possible that you will suffer side effects (painful arm, headache, fever, muscle pain)? It's really a small price to pay.

... unfortunately, being vaccinated does not mean you can simply stop following the protective measures (keep your distance, ventilate rooms, wash your hands, wear a mouth mask)? **Easing the measures** will be a **gradual process** as more people become vaccinated.

... You can always contact your GP or occupational physician with **questions or doubts**?
